DEVOIR DE CONTROLE N°1

PART A: LANGUAGE TASKS (15mks):

Task 1: Put the bracketed items in the right tense/form(5mks):

Tunisia's power sector is well developed, and nearly the entire population ①(enjoy) access to the national electricity grid.②(Approximate) 97% of Tunisia's electricity is generated from fossil fuels, mainly natural gas. In 2021, nearly half of Tunisia's natural gas needs ③(meet) through imports mainly from Algeria. Local gas production comes from the concessions of the country's national ④(explore) company as well as foreign companies' concessions. The highly anticipated Nawara gas field, which finally ⑤(begin) production in early 2020, is expected to help ⑥(reduce) the overall energy deficit once it reaches peak production. In addition to the local gas, Tunisia receives natural gas as a royalty on the Algerian Transmed gas pipeline ⑦(cross) Tunisia to Italy. In 2021, only 3% of Tunisia's electricity ⑧(generate) from renewables, including hydroelectric, solar, and wind energy. While STEG continues to resist private investment in the sector, the Tunisian government ⑨ (so far / award) to independent power producers 29 solar projects and 4 wind projects.⑩(Many) of the projects are still at various phases of implementation.

Task 2: Circle the right alternative (5mks):

Fossil fuels have played a vital role in powering human civilization for centuries and continue to be major sources of energy. These energy sources, ① (**solely /namely/ exceptionally**) coal, oil, and natural gas, ② (**provided / providing / have provided**) the necessary fuel for transportation, electricity generation, and industrial processes. ③(**Though / However / Although**), their extensive use has raised concerns about their environmental impact and long-term sustainability. Fossil fuels, ④ (**have formed / were formed / formed**) from the remains of ancient plants and animals, possess immense energy potential. Coal, a carbon-rich rock, has been ⑤ (**gradually / extensively / progressively**) mined and burned to generate electricity, fuel factories, and heat homes. Yet, the combustion of coal emits substantial amounts of carbon dioxide and harmful pollutants, contributing ⑥(**in / with / to**) global warming and air pollution. Oil, a viscous liquid found beneath the Earth's surface, ⑦ (**harnesses / exhausts / powers**) our vehicles, planes, and ships. Nevertheless, extracting oil through drilling poses the risk ⑧(**for / to / of**) devastating oil spills, damaging fragile marine ecosystems and wildlife habitats. Additionally, burning oil ⑨ (**absorbs / releases / limits**) greenhouse gases, exacerbating climate change and ⑩(**its / his / their**) associated consequences.

PART B: WRITING TASKS(5mks):

Task1: There are 5 mistakes in the paragraph below. Sort them out then correct them in the space provided below(2.5mks):

Nuclear power can be risky, and it's important understanding its dangers. One major concern is the possibility of a big nuclear accident, similar to what happened in Chernobyl and Fukushima. Such accidents can release harmful materials radioactive into the air, soil, and water, which can heart people and the environment. Another problem is how to safe get rid of nuclear waste, which stays dangerous of thousands of years.
